

Iron-On TRANSFER PAPER

Transform your T-shirts, jeans, bags, jackets, quilts, banners and home textiles! Print kid's drawings, photos, designs, famous paintings, clip art, digital art, text and scanned images!

Instructions:

1 Design

Select an image or photo on your computer, or create a design of your own. You can also draw (or paint) directly onto the white side of the transfer paper with crayon, markers or inks. If your image has text or a specific direction, make sure to mirror (or flip) your image before printing.

2 Print

In the print dialog box, set your paper setting to 'plain' and quality setting to 'normal' or 'quality.' Print your image on the white coated side of the transfer paper. Let it dry for 15 minutes.

3 Iron

Preheat the iron to the cotton/linen setting. Iron the fabric to remove wrinkles. On a smooth hard surface, place the transfer paper image side down onto fabric. Firmly place iron on your transfer image. Hold for 20 seconds then lift and repeat process until entire image has been pressed. Wait 2-3 minutes for transfer to cool before peeling off backing in a smooth and even motion.

Note: To launder, turn fabric inside out and wash according to the fabric's normal instructions.
